

Guidelines for Report:

1. Put equations always in the center and with equation number.
2. Write the full form of every MACRO when it is used for the first time.
3. Typical organization: Ch-1: Introduction, Ch-2: Literature survey, Ch-3: Main chapter on the topic, Ch-4 chapter on Analytical Discussion, simulation, comparative study, advanced insights on the topic gained during the study, Ch-5: Summary and Future scope for the topic. Next: Appendix for any derivation, underlying math, details of the system, etc. which you don't want to put in between the main text. Next: References
4. References must be cited in the main text at relevant places.
5. References should follow a link with each other in a manner of similarity, contrast, support, complement, preceding, succeeding, or countering while mentioned in the main text.
6. The resolution of all figures should be good enough to reflect all details.
7. Every figure must have a figure number and a properly detailed caption that can completely and concisely describe the figure without looking at the main text.
8. Every figure must be referred to in the main text with a line something like "figure 1.3 represents" with full details about the figure.
9. Only those figures which have certain information related to the work of the other authors can be put in your document directly citing their reference. Figures reflecting pre-existing knowledge or reflecting just creativity from the papers of other authors cannot be used directly in the report. Similar figures must be created with help of graphic tools and opensource repositories. Further, figure drawing must be in vector graphics format (at least text, symbols, and sketching).
10. Figures must have some text in terms of labels on them elaborating the figure.
11. Any plot in the figure must indicate all axes, their units, and some data points. Plots must use distinct markers and appropriate line thickness. These figures must have vector graphics format like EPS (or eps to PDF).
12. Keep the chapter name and heading left justified or as per specific academic guidelines
13. Do not go beyond the heading→ subheadings→ subsubheading. Always use the proper numbering for different levels of heading. If further division in the text is required, use bullets. Do not create a new level of heading/numbering in between. Do not put any heading without proper enumeration.
14. Use only black color text and uniform font throughout the report.
15. Do not create small-sized paragraphs in a large number.
16. The references should be formatted as per the accepted format (IEEE format is one example).
17. Do not start any section/subsection without an introductory paragraph.
18. Do not use capital in headings or other places except macros and special key words.
19. Do not use any heading in interrogative sense or having a question mark.

Guidelines for PPT:

1. All of the guidelines from the report part which are applicable.
2. Place less text on the slide.
3. Keep large formats that can be viewed from a distance.
4. Use mostly figures, block diagrams, flow charts, and bullets only in PPT.
5. Do not use too much decoration by colors.
6. Keep uniform formatting from slide to slide.
